Portfolio

SUMMARY

Java Full-Stack Developer with 1+ years of experience building and deploying **scalable, secure, and cloud-native applications**. Proficient in **Spring Boot, ReactJS, REST APIs**, and **AWS**. Skilled in **microservices, Docker, Kubernetes**, CI/CD automation, and **modern front-end frameworks**. Strong foundation in **system design, Agile practices**, and **clean code**. Actively seeking roles as **Software Engineer / Java Developer / Full-Stack Engineer**.

EDUCATION

New York University

M.Eng. in Computer Engineering, GPA: 3.5/4.0

GITAM University

B.E. in Computer Science, GPA: 8.3/10.0

New York, NY

Sep 2023 – May 2025

Hyderabad, India

Jun 2017 – Apr 2021

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend: Spring Boot, Hibernate, JPA, Node.js, Express, RESTful APIs, GraphQL, WebSockets

Frontend: React, Next.js, Bootstrap, Tailwind CSS, HTML5, CSS3

Cloud & DevOps: AWS (EC2, RDS, S3, Lambda, API Gateway, CloudWatch), Docker, Kubernetes, GitHub Actions, Jenkins, Terraform

Databases: MySQL, PostgreSQL, Oracle SQL, MongoDB, Redis

Testing & QA: JUnit, Mockito, Selenium, Jest, Postman, TDD

Security: JWT, OAuth 2.0, HTTPS, OWASP Secure Coding Practices

Other Tools & Practices: Agile (Scrum, Kanban), Jira, Git, SOLID, Clean Code, CI/CD pipelines, Monitoring (Grafana, Prometheus)

WORK EXPERIENCE

ValueLabs

Software Engineer

Hyderabad, India

Jul 2022 – Aug 2023

- Developed **Spring Boot + React microservices** supporting 10,000+ concurrent users; reduced latency by 30%.
- Built secure **REST APIs with JWT & OAuth 2.0**; optimized SQL queries improving throughput by 15%.
- Automated CI/CD pipelines with **GitHub Actions + Docker + Kubernetes**, cutting release cycles by 20%.
- Implemented caching with **Redis**, database indexing, and monitoring with **Grafana + Prometheus** for 99.9% uptime.
- Recognised as **Employee of the Month** for clearing backlog and delivering ahead of schedule.
- Collaborated with cross-functional teams in Agile sprints, wrote unit/integration tests, and conducted peer reviews, ensuring 95% code coverage.

Optival Health Solutions

Software Engineer Intern

Hyderabad, India

Apr 2021 – Sep 2021

- Developed secure healthcare features with **MERN stack + AWS S3** for encrypted document storage.
- Enhanced prescription accuracy by 20% through API refactoring, validation rules, and schema redesign.
- Built automated testing pipelines with Jest + Postman, reducing manual QA effort by 40%.
- Collaborated in Agile sprints, integrating CI/CD pipelines and deploying to AWS cloud environments.

PROJECTS

- **Car Rental System**((GitHub))(Live): Multi-role platform (**Spring Boot, React, MySQL, AWS**) with inventory, booking, and payments. Implemented role-based access, CI/CD deployment pipelines, unit + integration tests, and query optimization for **sub-200ms response times**.
- **Jewelry Showcase** (GitHub)(Live): Cloud-hosted catalog (**React, AWS S3/EC2/RDS, Redis**) with responsive UI and image hosting on S3. Added Redis caching, API optimisations, and containerised deployments with Docker + Kubernetes.
- **Appointment Scheduler** (GitHub): Enterprise-grade booking system (**Spring Boot, MySQL, JWT, Redis, Docker**) managing 1,000+ bookings/month. Integrated chatbot, email / SMS notifications, Grafana monitoring, and load testing with JMeter.
- **Cruise Management System** (GitHub): Admin portal (**React, Spring Boot, Oracle DB**) with **role-based access control**, CI/CD pipelines, responsive dashboards, and API integration testing.
- **GPT Chronicles** (GitHub): Fine-tuned **GPT models in PyTorch** on datasets from the classic literature. Interactive notebooks built for creative text generation, data set pre-processing, and evaluation with BLEU/ROUGE scores.
